Summary

More than eight years of software development experience, with strong analytical skills and a broad range of computer expertise. Most of my career in IT field is related with C/C++ languages and related to computer graphics applications but also have experience with C#, .NET, PHP and Java. Overall, I consider myself ambitious and enthusiastic about improvement of personal skills to achieve outstanding results in a reliable way. Enthusiastic for agile methodologies and architecture.

Keywords and skills set

C, C++, STL, Lua, IUP, QT, OpenGL, GLSL, **C#, .NET 4 / 4.5**, Winform, Oracle, Entity Framework, Ninject, NUnit, Specflow, SOAP, WSDL, PHP (CakePHP and Laravel), **Java (Spring Boot and Play Framework)**, **MySQL, SQL Server, HTML, CSS**, jQuery, AngularJS and JSON.

Relevant Applications / Tools

Visual Studio 2010 / 2015, Atom, Oracle SQL Developer, Oracle SQL Data Modeler and Podio.

Application Lifecycle Management tools

Git, SVN, Github, Bitbucket, Jenkins, Jira, Scrum, Kanban and Slack.

Operational Systems

Windows, Ubuntu and Arch Linux.

Education

2007 - 2011, PUC-Rio (Pontifical Catholic University of Rio de Janeiro) (www.puc-rio.br)

Bachelor's degree in Computer Information System

2009 - 2011, PUC-Rio (Pontifical Catholic University of Rio de Janeiro) (www.puc-rio.br)

Teacher Assistant in subject as Programming I (beginning), Programming II (moderate), Advanced Data Structures (advanced) and Computer Graphics.

Employment History

Company: Altran (www.altran.com)

Project: Philips MultiOne

Position: Advanced Consultant Engineer (Full-Time), January 2017 until now

The MultiOne project consists of developing tools for factories to configure all of Philips Lighting's programmable driver portfolio. More information about MultiOne can be found at: www.philips.com/multione

At Altran I have been working as a C# .Net software engineer within the outsourced project from Philips Lighting in partnership with Altran Netherlands.

Key Technologies: C#, .NET 4.6, Winform, NUnit, Specflow, TestLink, SonarLint, Resharper, SVN, Jira, Scrum, Balsamiq and Jenkins.

Highlights:

- Leader of the Portugal team.
- Improve and implementation of a new software architecture.
- Maintenance and implementation of new features.

Project: AppCandidate

Position: Advanced Consultant Engineer (Full-Time), October 2016 until December 2016

AppCandidate is an internal project to assist and improve the system of new candidates for Altran. I am helping in the elaboration of a system to automate the self-completion of employee forms. The purpose of this system is to provide a dynamic forms web application that automatically fill documents.

Key Technologies: Java, Spring Boot, MySQL, Angular2, Git and NinjaMock.

Highlights:

- Requirements analysis and building the functional specifications.
- Create mockups using NinjaMock. [preview](#)
- Study and start the project using Java Spring Boot (backend), MySQL (database) and Angular2 (frontend).

Company: Tecgraf (www.tecgraf.puc-rio.br)

The Tecgraf Institute of Technical-Scientific Software Development of PUC-Rio (Tecgraf/PUC-Rio) stands out in the national and international scenario by developing innovations on computer systems applied to all areas of the petroleum production chain, mostly in cooperation with Petrobras. These innovations are based, predominantly, on researches conducted in partnership with the Academic Departments of PUC-Rio.

Project: PUMA

Position: Lead Software Developer (Full-Time), May 2016 - October 2016

PUMA is a systems for logistic planning control and monitoring of oil supplies based on stock control; oil allocation in refineries; selection of logistic infrastructure projects to be implemented. Planning and monitoring of logistic network, from starting material extraction, going through processing, to the distribution of end products in consumer markets.

Key Technologies: C#, .NET 4 / 4.5, Winform, Oracle, Entity Framework, Ninject, NUnit, SOAP, WSDL, Git, Jira and Scrum.

Responsible for:

- Understanding the customer needs to automate recurrent manual processes.
- Developed of components using Winform to increase team productivity.
- Using Entity framework 6.0 to access Oracle database.
- Developed of a complex MOCK system to help unit test.
- Developed routines to automate the engineering process.
- Web service using WSDL / SOAP to communicate with SAP service.
- Improve the architecture using the book of [Scott Millett \(Professional ASP.NET Design Patterns\)](#) as reference.

Project: Anflex (www.tecgraf.puc-rio.br/pt/software/sw-anflex.html)

Position: Intern (Part-Time), 2008 - 2011

Software Developer (Full-Time), 2011 - 2015

Lead Software Developer (Full-Time), 2015 - 2016

Systems for projects of risers, mooring for ships, and floating platforms. Tools for establishing the dimensions and configuration of a riser, so it can endure unfavorable environmental actions. Nonlinear analysis, static and dynamic, deterministic and random, through finite elements method, models for flexible rises, (such as rigid in catenary and mixed), mooring lines and TPL platform tendons. Graphic interfaces for data generation of numerical processing and results visualization.

Key Technologies: C, C++, STL, Lua, IUP, QT, OpenGL, GLSL, HDF5, Desktop Application Development, SVN, Jira, Kanban.

Responsible for:

- Promoted and developed the use of Lua as a scripting language to automate procedures in C/C++.
- Developed several parallel routines using pthread.
- Refactoring old Fortran projects (physical simulation and finite element) to C++.
- BSc Final Project - [Rendering Photorealistic Offshore Models](#). Development of computational geometry algorithms like LOD (low of detail), frustum culling, ray tracing, volumetric shadows and others.
- Refactoring all mesh render using a newer API OpenGL 3.3 and Shader - [link](#).
- Development of a plot library of one or more datasets.
- Using HDF5 files to manipulate massive volume of data.
- Training courses on how to use the program for new engineers.
- Interface between the programmers and director, having ownership of development plans and having supervisory responsibilities in delegating work ensuring that software project come in on time.

Company: SofaCoding (sofacoding.com)

Position: Co Founder and Software Developer (Part-Time and Weekend Job), 2014 - 2015

SofaCoding is a software developer house, located in Rio de Janeiro, that develops solutions for web and mobile.

Key Technologies: PHP (CakePHP and Laravel), JavaScript frameworks (Sencha Touch and Ionic), Java (Play Framework and Spring), MySQL, HTML, CSS, jQuery, AngularJS, JSON, Git and Scrum.

Responsible for:

- Several projects using LAMP (CakePHP, Laravel and MySQL) for different areas.
- Developed system for sales visit and business cards using Java (PlayFramework) and [Podio](#) (backend and CMS) - vosso.com.br.
- Developed system for sales kids toys using Magento - minieinstein.com.br.
- Developed system for rock band using Wordpress - matanza.com.br.
- Restructuring of the e-commerce of Zerezes glasses sale using [WooCommerce](#) - zerezes.com.br.
- Financial management and Project management.
- Coding 50% of the time and dealing with clients, team and hiring/monitoring freelances (developers and designers).

Languages

Spanish (intermediate), Portuguese (native) and English (advanced).

Interests

- Interested in tech blogs and sites like Gizmodo and ZDNet.
- Fascinated by new technologies such as pebble, raspberry pi and internet of things.
- Interested in keeping up to date on news programming languages and frameworks.
- Enjoy music, films, TV shows and podcasts.
